AUTOMATIC FLUORESCENCE CO-LOCALIZATION

Brain Co-localization Analyzer

Upload green, red, and blue channels. The backend automatically segments green cells first, then measures red and blue signal inside each green cell to count marker-positive and double-positive cells.

Green channel

Master cell/body channel

Choose File Autofluorescence_Green.jpg

Autofluorescence_Green.jpg

Red channel

TRPA1 or red marker

Choose File TRPA1_red_dots.jpg

TRPA1_red_dots.jpg

Blue channel

TRPV1 or blue marker

Choose File TRPV1_blue_dots.jpg

TRPV1_blue_dots.jpg

Automatic mode enabled

No manual min area, max area, or overlap distance is needed. Thresholds and cell-size limits are estimated from the images.

Analyze Brain

Cell Counts

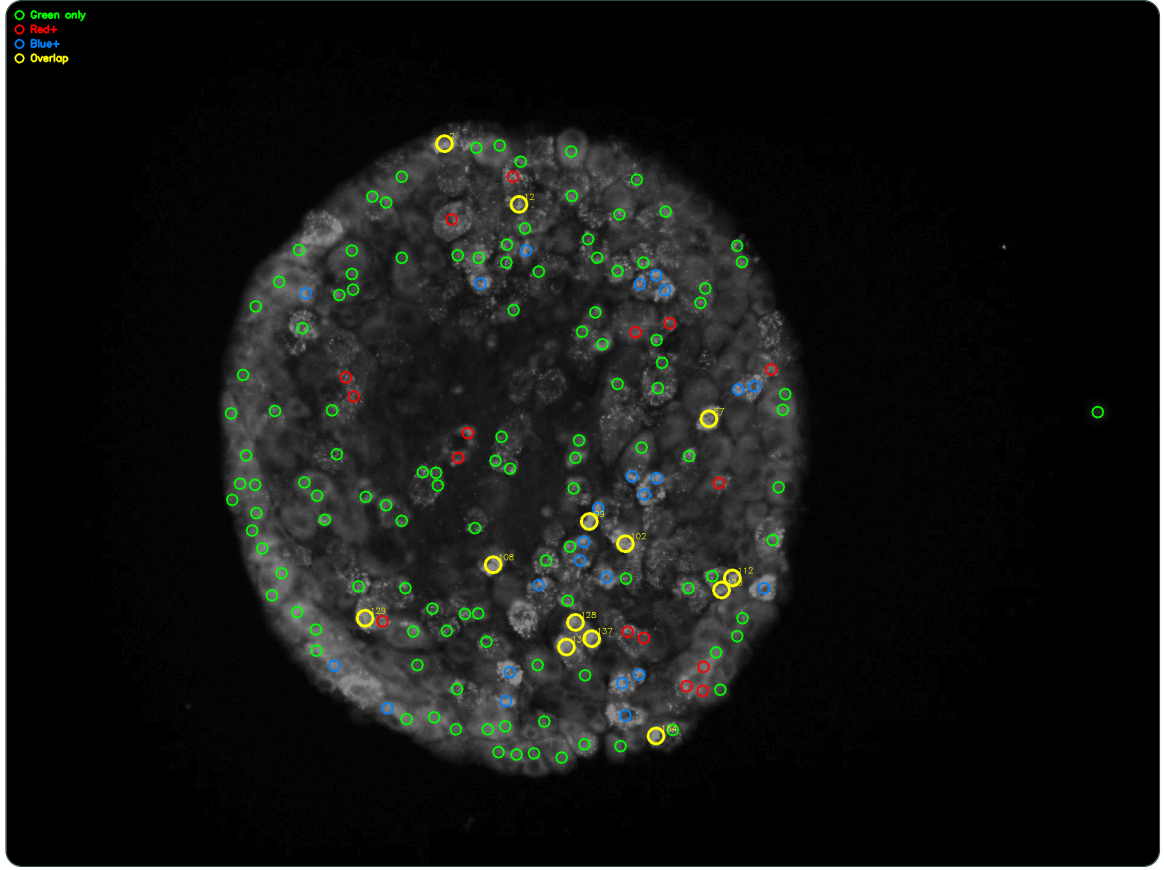

Total Green Cells	Green Only	Red Positive	Blue Positive	Overlap
170	117	29	37	13
all segmented cells	68.82%	17.06% of green	21.76% of green	7.65% double+

What the diagram is showing

The overlay uses the green channel as the background. Green circles are cells with no red or blue marker, red circles are red-positive cells, blue circles are blue-positive cells, and yellow circles are cells where red and blue are both detected inside the same green-cell mask.
